

As a licensed amateur operator, I have serious concerns about the recent proposals concerning broadband communications over power lines. We are seeing more and more FCC-sanctioned devices (e.g., unlicensed Part 15 devices) which result in noise and interference to our operations. Broadband communications over power lines present a significant threat to amateur operations.

I ask that you solicit the input of the ARRL in your evaluation of these technologies and apply the same standards of proof that were recently applied in turning down the ARRL's request for spectrum in the 5 MHz and 136 kHz regions.

Best regards,

Rick Clifford
